

**CS 4210 - Course Project Proposal**  
**Maximum Points: 100 pts (10% of the project grade).**  
**Teams of 4/5 students.**

Write a 1(2) page manuscript using the IEEE LaTeX template (<https://www.ieee.org/conferences/publishing/templates.html>). I recommend using overleaf (<https://www.overleaf.com/>). Include all the following components in your manuscript:

- Title of the project (final)
- Team members (the 1<sup>st</sup> student listed will be the team representative – my primary contact) (final)
- Abstract - short intro (preliminary)
- Introduction, including the problem to be solved (it cannot be trivial), the authors motivation, dataset to be used. This should be a \section (preliminary)
- Dataset details - it cannot be too small and should include #samples, features, class distribution. This should be a \section (preliminary)
- Methodology – sampling, train/test design, machine learning model (s) to be used, and model evaluation. This should be a \section (preliminary)
- References (preliminary)

There will be a quick review process to evaluate the project proposed. Changes might be requested and must be addressed if one of these items (problem, dataset, machine learning model) is considered trivial or insufficient.

Some popular free datasets: <https://archive.ics.uci.edu/ml/datasets.php>, <https://datahub.io/>, <https://www.openml.org/>, <https://www.kaggle.com/datasets/>.

In addition to updates to the preliminary sections included before, there will be other required sections to be added later (in red):

- Title of the project (final)
- Team members (final)
- Abstract – summary of results needs to be included (final)
- Introduction - results needs to be included and discussed (final)
- Dataset (final)
- Methodology (final)
- Results (final)
- Related work (final)
- Conclusion (final)
- References (final)

Deadline: 10/25/2025 11:59pm.

Group submission on Gradescope. Only one submission should be made by the team representative, and **all team members should be included.**
